**Customer Problem Statement Template:**

Customer: Employee requesting a network service.

Problem:

Employees experience delays and confusion while requesting network services because requests are handled manually through emails or phone calls. There is no proper tracking, approval process, or status visibility, resulting in slow service delivery and poor communication.

Need:

A centralized ServiceNow-based Network Request Management System that allows users to submit requests online, automatically routes them for manager approval, tracks request status, sends notifications, and maintains request records.

Expected Outcome:

A fast, transparent, and automated request management process that reduces manual effort, improves approval efficiency, and enables users to monitor their requests from submission to completion.

|                            |                                                                                                       |                                                                                                                                                                           |
|----------------------------|-------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>I am</b>                | Describe customer with 3-4 key characteristics - <i>who are they?</i>                                 | I am an employee in the organization who needs network services such as internet access, VPN, firewall changes, or new network connections to perform my daily work.      |
| <b>I'm trying to</b>       | List their outcome or "job" the care about - <i>what are they trying to achieve?</i>                  | I'm trying to request the required network service quickly and get approval from my manager so I can access the network resources I need without delays.                  |
| <b>but</b>                 | Describe what problems or barriers stand in the way – <i>what bothers them most?</i>                  | But the current process is manual, slow, and unclear. I have to send emails or follow up multiple times, and I cannot track the status of my request.                     |
| <b>because</b>             | Enter the "root cause" of why the problem or barrier exists – <i>what needs to be solved?</i>         | Because there is no centralized system to submit, approve, and track network requests. The process depends on manual communication and lacks automation and transparency. |
| <b>which makes me feel</b> | Describe the emotions from the customer's point of view – <i>how does it impact them emotionally?</i> | Which makes me feel frustrated and anxious due to delays and uncertainty. It affects my productivity and the timely completion of my work.                                |
